Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17 drawn to a data storage and retrieval system and method for performing a work request within said system, classified in class 700, subclass 214.
 - II. Claims 18-30, 34-43, drawn to a method and system for providing failover protection in a data storage library, classified in class 700, subclass 245.
 - III. Claim 31-33, 44-46, 47-52, and 53-58, drawn to a method and system for adding and removing data storage medium, classified in class 369, subclass 34.
 - IV. Claims 59 and 60, drawn to a method and computer useable medium for returning accessor(s) to service, classified in class 700, subclass 248.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I, II and III, II and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed for patentability. The subcombination has separate utility such as: for used to control accessors in a data library without any failover protection (Group I); for used in adding and removing data

Art Unit: 3651

storage mediums without any failover protection (Group III); for used in adding and accessor to the library system without any failover protection (Group IV).

3. Inventions I and III, I and IV, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as for adding and removing portable data storage mediums without the particulars of the lifting servo, invention IV has separate utility such as for adding accessor(s) to the library system without the particulars of the lifting servo, and invention I has separate utility such as for controlling the movement of the accessors based on a work request without having to add any storage medium or accessor. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
